

I feel that acceptance of this proposal will be detrimental to the Amateur Radio Service and may cause unneeded enforcement problems, in that you will be mixing Unlicensed operators with Licensed operators who may violate the law by trying to communicate with each other, or even arguments about harmful interference and other issues, between these two different groups of operators. Since the small cost of U.S. approved FRS radios makes this really a non issue, I object to the acceptance of this proposal.

Best Regards,
